

Babar Azam T20I Runs Prediction

AI Course Project Proposal | Muhammad, FUAAST, Karachi

1. Selected Player

Babar Azam (Pakistan cricketer, batter)

2. Objective

Predict how many runs Babar Azam will score in his next T20 International match.

3. Approach

Supervised learning (regression task: the output is a number, runs).

4. Model

Decision Tree (main model), compared with **Random Forest**.

5. Reason

- Supervised: every past match has a known runs value, so the data is labeled.
- Decision Tree: handles features like opposition, venue and batting position, captures non-linear patterns, and is easy to interpret.
- Random Forest: combines many trees to reduce overfitting and give more stable predictions.

6. Dataset (Authentic Sources)

Main dataset (Kaggle): Babar Azam T20I Stats 2016-2025, match by match

<https://www.kaggle.com/datasets/ahsanalirajpoot/babar-azam-t20i-stats-20162025-match-by-match/data>

Verification source (ESPNcricinfo): Babar Azam batting and bowling stats

<https://www.cricinfo.com/cricketers/babar-azam-348144/bowling-batting-stats>

The Kaggle data will be cross-checked against ESPNcricinfo's official records to confirm it is authentic.
